NAHALSAN engineering company began its activity by producing automobile parts in 1977. After the gradual increase in our production capacity and the expansion of factory area to 15,000 and later 12,000 square meters of indoors space, the company focused on improving the quality and quantity of its products by establishing design, engineering, R&D, and quality control departments.

The idea of designing and manufacturing different types of metal stools and chairs was initiated in 2012 and after improving product diversity and quality, it was registered under the brand *Imen Hami Farasan* in 2016 and introduced to the market.

In 2015 this brand acquired the ISO9001 and CE standards. In 2019, this brand acquired IRAN STANDARD.

With more than 30 years of valuable experience in industrial manufacturing, NAHALSAN-PARAX Group began manufacturing and designing contemporary life necessities in 2012.

Our goals are creative and unique design tailored to the taste of the contemporary generation, leading to customer satisfaction and their enjoyment of our products.

Our deep commitment to designing and producing quality products has led to creation of durable, unique, standard, and ergonomic products.

The use of high-quality raw materials has led to excellent lightweight yet sturdy products.

Manufacturing products with a diverse color pallet, to meet tastes of our client, in different sizes, and at suitable prices with a reliable warranty are some of the professional codes of PARAX.

NAHALSAN products consist of various types of stools, chairs, and desks/tables in different models.

Quality Control (QC)

NAHALSAN strives to produce reliable, quality Iranian products by developing the necessary design, production, and quality control infrastructure aiming for customer satisfaction. Accordingly, a well-equipped QC lab was established in the factory that makes it possible to conduct all necessary tests on site.

Mechanical testing device (for testing the strength and stability of products)

نهال سان

ایده هایی برای زندگی معاصر

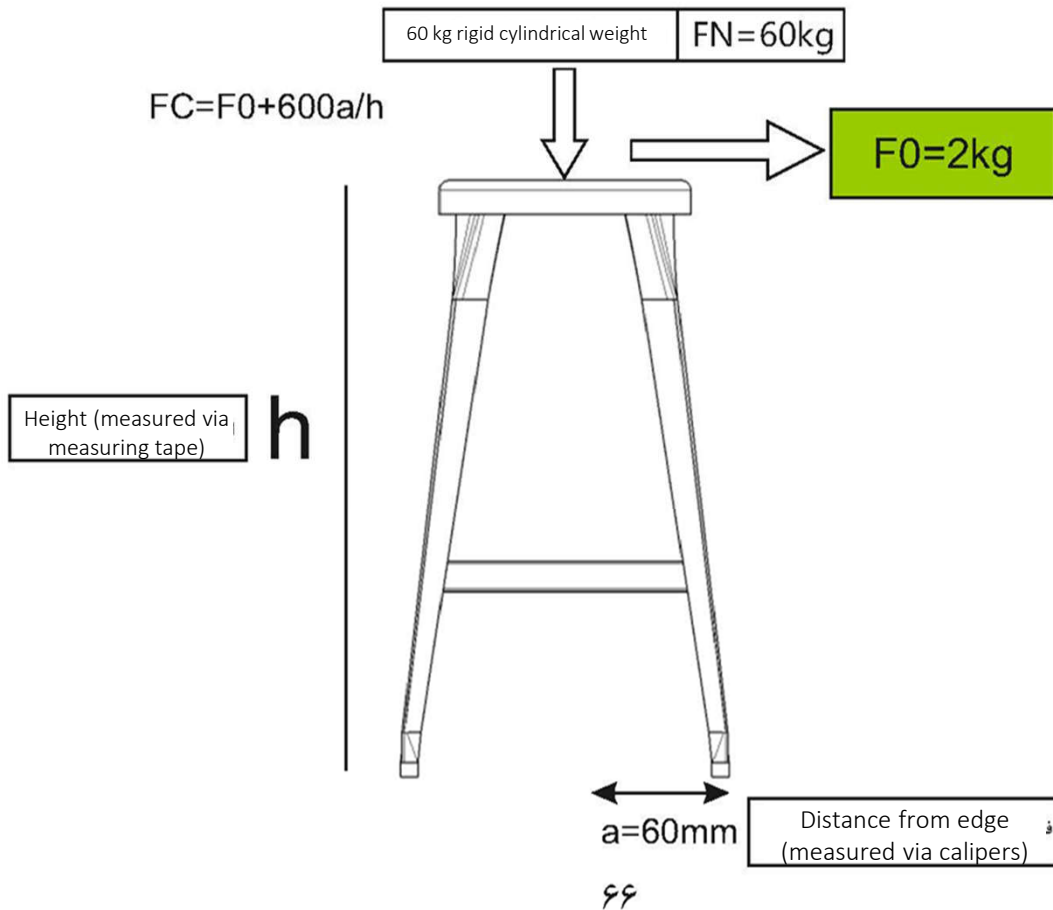

NAHALSAN

ideas for contemporary life

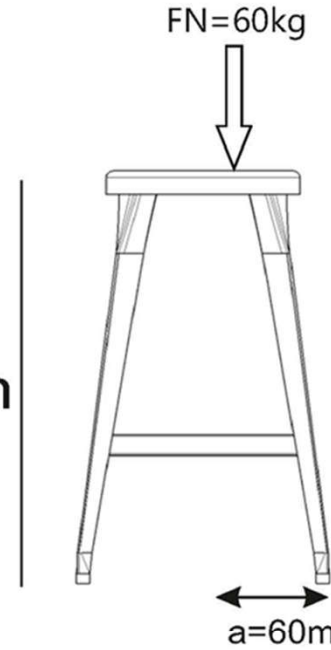

According to the 9184 standard, the load tests in horizontal and vertical axes, off-center point, and the drop tests were conducted on the stool. The following table presents the results.

Horizontal and vertical loading test on the stool (Articles 4-7, standard 9184).						
Test Index	Unit	35cm	50cm	60cm	70cm	90cm
FO	kg	20	20	20	20	20
FN	kg	600	600	600	600	600
a	mm	60	60	60	60	60
h	mm	350	500	600	700	900
FC	kg	122.9	72	60	51.42	60
Result		stable	stable	stable	stable	stable

Vertical off-center loading test on the stool seat						
Symbols	Unit	35cm	50cm	60cm	70cm	90cm
F	kg	60	60	60	60	60
a	mm	60	60	60	60	60
Result		No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)

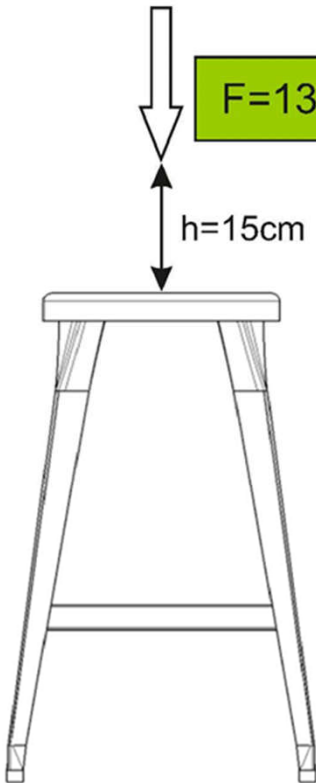

60 kg rigid cylindrical weight

Height (measured via measuring tape)

h

Drop test for the stool

Distance from the edge (measured via calipers)

Drop test on the seat center of the stool						
Test Index	واحد	35cm	50cm	60cm	70cm	90cm
F1	kg	102	102	102	102	102
F2	kg	136	136	136	136	136
h	cm	15	15	15	15	15
Result		No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)	No deformation or fracture (stable)

Salt Spray Test

After the strength and stability tests, the product coatings need to be assessed based on their material and the high-quality oven-cured electrostatic powder paint so that the final product is deserving of the clients.

This test is conducted via the salt spray device in another department of the lab. The final products are exposed to an accelerated corrosion environment according to the respective standards for assessing their coating resistance against corrosion, blistering, and rusting.
